

AAAC-6201 All Aluminum Alloy Conductor

A Viakable Company

CME Wire and Cable offers AAAC concentric-lay-stranded conductors in single and multi-layer conductor designs to optimize the strength and the current carrying capacity for transmission and distribution projects for which AAC conductors do not provide the required strength and ACSR conductors are either not required or suitable.

Construction

AAAC is a homogenous concentric-lay-stranded conductor made from round aluminum 6201-T81 wires. AAAC conductors are available in single and multi-layer constructions. These choices provide the necessary strength and the current carrying capacity for given applications.

Specifications

AAAC conductors are manufactured in accordance with the ASTM specifications B398 and B399.

Features

The high strength to weight ratio provided by the 6201-T81 alloy makes the homogeneous construction of AAAC

conductors a preferred choice for transmission and distribution projects where:

- conductor with more strength than AAC is required;
- conductor with comparable strength than ACSR is preferred; and
- higher corrosion resistance than ACSR is essential.

ALUMINUM CONDUCTOR
